

**Connect the Dots
and Find out Who is Swimming
in our Marine Protected Areas.**

What are Marine Protected Areas (MPAs)?

They are areas of ocean set aside to protect wildlife and habitat.

Where are they located?

California's new MPAs include dozens of sites on the coast, including The Farallon Islands, Año Nuevo, Point Lobos and La Jolla.

MPAs will ensure that future generations will be able to enjoy the natural heritage of California's coastal waters.

To view a map for other locations of MPAs and for more information please visit www.wildcoast.net or www.caloceans.org.

Lobsters	Feeding

California is historically one of the richest marine ecosystems in the world. Forty years ago abalone were abundant up and down the coast - but due to severe overfishing, abalone are now rare to find.
